

VACCINATION MANAGEMENT SYSTEM

Second Semester (E-Project)

Vaccination Management System

Acknowledgement

Thanks to Almighty Allah, The most Beneficial and The most merciful, Who gave me mind to think and Heart to feel creativity & creation depends on thinking

With His Grace & Mercy for giving me strength and ability to make me complete this Project. I would like to express our gratitude and appreciation to all those who gave us the possibility to complete this project, a special thanks to my teacher.

Sir Tameez Nawab, Who's help, stimulating suggestions & encouragement, helped me to coordinate in my project. I would also like to express my deepest gratitude to my beloved parents whose well-wishes enabled me to transform my dream & thought into a reality.

*I hereby presenting project in titled "**VACCINATION MANAGEMENT SYSTEM**" in your hands.*

I have tried my best to take all relevant and important topics in consideration so that this project May become more effective & a better outlook to come. I earnestly hope that this project will provide all the necessary information required for the user to fulfill their requirement. However, suggestion for improvement of the project will be thankfully acknowledge.

In the existing system, Vaccines are provided for infants and children under teenage by various aspects such as by attending school manually and there is a chance that some of the children's and infants may miss the opportunity of getting vaccinated due to some mandatory reasons. Which leads to loss of life or gets affected by various diseases such as polio... etc? This is a time delay process to wait for each and every one all over the places.

Proposed Solution

We can change this manual system into e-vaccination system by collecting the info of infants, registered under website so that those who didn't took vaccination can avail one more opportunity to save the life of their children . By this system a lot of man-hours can be saved and it is efficient too.

Required Features

PARENT

- Details of child
 - Update and maintain the child details of vaccination
- Vaccination Dates
 - Can get notified through in Dashboard of their respective accounts about upcoming vaccinations.
- Book Hospital
 - Use can search the list of hospital and book schedule for the vaccine dates
- Report of vaccination taken
 - Can get the report status of previous vaccination of their respective Infants

HOSPITAL

- Register & Login
 - Can register and login into the app with hospital name, address and location details.
- Update Vaccine status
 - Hospital will receive the appointment once its booked from admin side. If vaccination is completed they will update the status to Vaccinated or not.

User Types

- Admin: To manage information that we will be seen in homepage and approve or reject patients appointment.
- Patient: Patient need to Register and Login. To get appointment.
- Hospital: Manage schedules and appointments booking slots.

ADMIN

- All child details
 - View all child profile details
- Date of vaccination
 - Upcoming Date of vaccination of all child
- Report of vaccination
 - Child, Vaccination (Date wise report)
- List of vaccine
 - available or unavailable
 - Admin can view the availability of the vaccination
- Request from parents
 - Approve or Reject
 - Once the request for appointment from parent side, it will be approved from the admin
- Add Hospital
 - Admin can add the hospital details
- Update/Delete Hospital
 - Admin can update or delete the hospital details
- List of hospitals
 - Admin can view the hospital details
- Booking Details
 - Admin can view the booking details from parent side for booking vaccination
